

0.800-INCH SEVEN SEGMENT DISPLAYS

HIGH EFFICIENCY RED MAN8900 SERIES

DESCRIPTION

The MAN8900 Series is a family of large digits 0.8-inches in height. This series combines high brightness, large size, good aesthetics and is designed to be used where accurate readable displays need to be viewed over a distance. All models use right hand decimal points.

FEATURES

- High performance nitrogen-doped GaAsP on GaP
- Large, easy to read, digits
- Common anode or common cathode models
- Fast switching — excellent for multiplexing
- Low power consumption
- Bold solid segments that are highly legible
- Solid state reliability — long operation life
- Rugged plastic construction
- Directly compatible with integrated circuits
- High brightness with high contrast
- Categorized for Luminous Intensity (See Note 6)
- Wide angle viewing ... 150°
- Low forward voltage
- Red face and Red segment for good ON or OFF contrast
- These devices have a Red face and Red segments

APPLICATIONS

- For industrial and consumer applications such as:
- Digital readout displays
 - Instrument panels

- | NOTES | |
|---|--|
| <ol style="list-style-type: none"> 1. The digit average Luminous Intensity is obtained by summing the Luminous Intensity of each segment and dividing by the total number of segments. Intensity will not vary more than $\pm 33.3\%$ between all segments within a digit. 2. The curve in Figure 3 is normalized to the brightness at 25°C to indicate the relative efficiency over the operating temperature range. 3. Leads of the device immersed to 1/16 inch from the body. Maximum device surface temperature is 140°C. 4. For flux removal, Freon TF, Freon TE, Isoproponal or water may be used up to their boiling points. 5. All displays are categorized for Luminous Intensity. The Intensity category is marked on each part as a suffix letter to the part number. | |
