Description:

The **OPB960, OPB970, OPB980** and **OPB990** series of Photologic® photo integrated circuit switches provide optimum flexibility for the design engineer. Building from a standard housing with a 0.125" (3.180 mm) wide slot, a user can specify the type and polarity of TTL output, discrete shell material, aperture width and choice of mounting configurations. **OPB960** through **OPB973** have 0.425" (10.795 mm) PCBoard leads with 0.320" (8.1 mm) spacing. **OPB980** through **OPB993** have 24" (609 mm) 26 AWG wires.

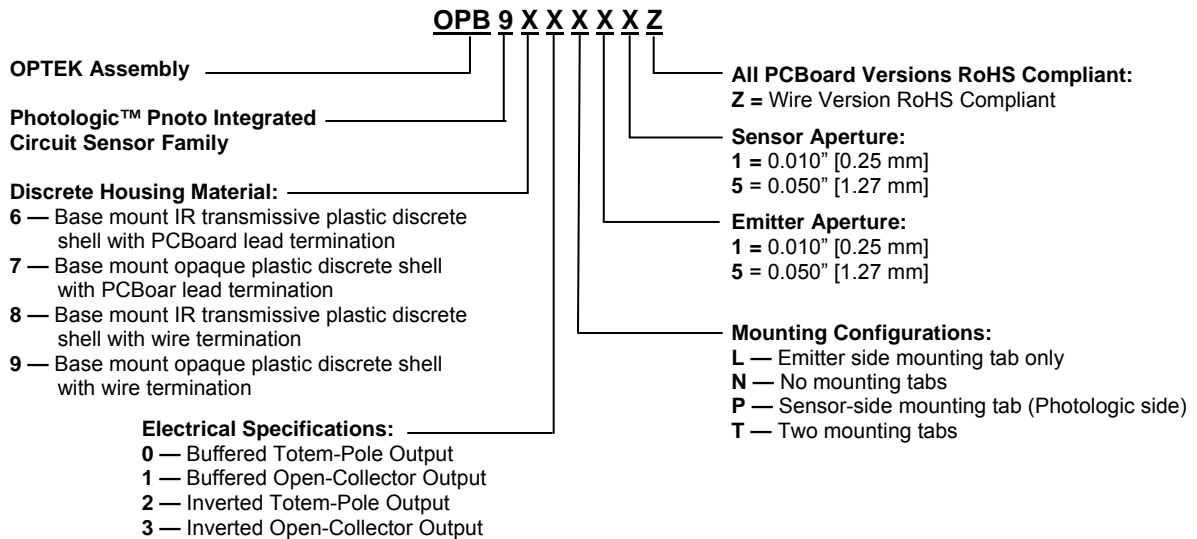

All devices in this series exhibit performance over supply voltages ranging from 4.5 V to 16.0 V, and may be specified as buffered or inverted with Totem-Pole or Open Collector output. Devices are also TTI/LSTTL compatible and can drive up to 10 TTL loads.

Custom electrical, wire and cabling and connectors are available. Contact your local representative or OPTEK for more information.

Applications:

- Mechanical switch replacement
- Mechanical limit indication
- Edge sensing
- Speed and direction indication
- Rotary encoders
- Sliding Door Automotive and Liftgate applications
