

## CD4066A Types

### CMOS Quad Bilateral Switch

For Transmission or Multiplexing of Analog or Digital Signals

RCA CD4066A is a quad bilateral switch intended for the transmission or multiplexing of analog or digital signals. It is pin-for-pin compatible with RCA-CD4016, but exhibits a much lower ON resistance. In addition, the ON resistance is relatively constant over the full input-signal range.

The CD4066A consists of four independent bilateral switches. A single control signal is required per switch. Both the p and the n device in a given switch are biased ON or OFF simultaneously by the control signal. As shown in Fig. 1, the well of the n-channel device on each switch is either tied to the input when the switch is ON or to  $V_{SS}$  when the switch is OFF. This configuration eliminates the variation of the switch-transistor threshold voltage with input signal, and thus keeps the ON resistance low over the full operating-signal range.

The advantages over single-channel switches include peak input-signal voltage swings equal to the full supply voltage, and more constant ON impedance over the input-signal range. For sample-and-hold applications, however, the CD4016 is recommended.

These types are supplied in 14-lead hermetic dual-in-line ceramic packages (D and "F" suffixes), 14-lead dual-in-line plastic package (E suffix), 14-lead ceramic flat package (K suffix), and in chip form (H suffix).

#### SPECIAL CONSIDERATIONS – CD4066A

- In applications where separate power sources are used to drive  $V_{DD}$  and the signal inputs, the  $V_{DD}$  current capability should exceed  $V_{DD}/R_L$  ( $R_L$  = effective external load of the 4 CD4066A bilateral switches). This provision avoids any permanent current flow or clamp action on the  $V_{DD}$  supply when power is applied or removed from CD4066A.
- In certain applications, the external load-resistor current may include both  $V_{DD}$  and signal-line components. To avoid drawing  $V_{DD}$  current when switch current flows into terminals 1, 4, 8, or 11, the voltage drop across the bidirectional switch must not exceed 0.8 volt (calculated from  $R_{ON}$  values shown).
- No  $V_{DD}$  current will flow through  $R_L$  if the switch current flows into terminals 2, 3, 9, or 10.
- Minimum bilateral switch output load resistance is 100  $\Omega$ .

#### Features:

- 15-V digital or  $\pm 7.5$ -V peak-to-peak switching
- 80 $\Omega$  typical ON resistance for 15-V operation
- Switch ON resistance matched to within 5  $\Omega$  over 15-V signal-input range
- ON resistance flat over full peak-to-peak signal range
- High ON/OFF output-voltage ratio: 65 dB typ. @  $f_{IS} = 10$  kHz,  $R_L = 10$  k $\Omega$
- High degree of linearity: < 0.5% distortion typ. @  $f_{IS} = 1$  kHz,  $V_{IS} = 5$  V p-p,  $V_{DD}-V_{SS} \geq 10$  V,  $R_L = 10$  k $\Omega$
- Extremely low OFF switch leakage resulting in very low offset current and high effective OFF resistance: 10 pA typ. @  $V_{DD}-V_{SS} = 10$  V,  $T_A = 25^\circ C$
- Extremely high control input impedance (control circuit isolated from signal circuit):  $10^{12}$   $\Omega$  typ.
- Low crosstalk between switches: -50 dB typ. @  $f_{IS} = 0.9$  MHz,  $R_L = 1$  k $\Omega$
- Matched control-input to signal-output capacitance: Reduces output signal transients
- Frequency response, switch ON = 40 MHz (typ.)
- Quiescent current specified to 15-V
- Maximum control input leakage current of 1- $\mu$ A at 15-V (Full package-temperature range)

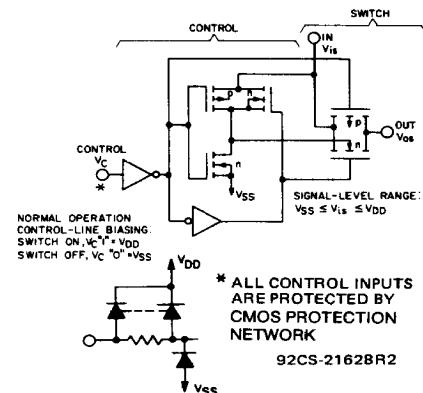

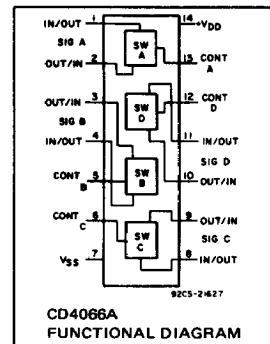

Fig. 1 – Schematic diagram of 1 of 4 identical switches and its associated control circuitry.

#### MAXIMUM RATINGS, Absolute-Maximum Values:

STORAGE TEMPERATURE RANGE ( $T_{STG}$ ) . . . . .	-65 to +125 $^\circ C$
OPERATING TEMPERATURE RANGE ( $T_A$ ):	
PACKAGE TYPES D, F, K, H . . . . .	-55 to +125 $^\circ C$
PACKAGE TYPE E . . . . .	-40 to +85 $^\circ C$
DC SUPPLY VOLTAGE RANGE, $V_{DD}$ (Voltages referenced to $V_{SS}$ ) . . . . .	-0.5 to +15 V
INPUT CURRENT (TRANSMISSION GATE INCL.) . . . . .	$\pm 10$ mA
POWER DISSIPATION PER PACKAGE:	
FOR $T_A = -40$ to $+60^\circ C$ (PACKAGE TYPE E) . . . . .	500 mW
FOR $T_A = +60$ to $+85^\circ C$ (PACKAGE TYPE E) Derate Linearly at 12 mW/ $^\circ C$ . . . . .	200 mW
FOR $T_A = -55$ to $+100^\circ C$ (PACKAGE TYPES D, F, K) . . . . .	500 mW
FOR $T_A = +100$ to $+125^\circ C$ (PACKAGE TYPES D, F, K) Derate Linearly at 12 mW/ $^\circ C$ . . . . .	200 mW
DEVICE DISSIPATION PER SECTION:	
FOR $T_A =$ FULL PACKAGE-TEMPERATURE RANGE (ALL PACKAGE TYPES) . . . . .	100 mW
ALL SIGNAL AND DIGITAL CONTROL INPUTS . . . . .	$V_{SS} \leq V_I \leq V_{DD}$
LEAD TEMPERATURE (DURING SOLDERING):	
At distance $1/16 \pm 1/32$ inch (1.59 $\pm$ 0.79 mm) from case for 10 s max. . . . .	+265 $^\circ C$

#### OPERATING CONDITIONS AT $T_A = 25^\circ C$

For maximum reliability, nominal operating conditions should be selected so that operation is always within the following ranges.

CHARACTERISTIC	$V_{DD}$	MIN.	MAX.	UNITS
Supply Voltage Range ( $T_A$ = Full Package Temperature Range)	—	3	12	V

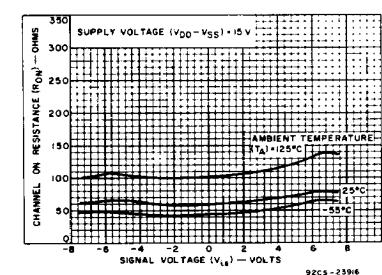

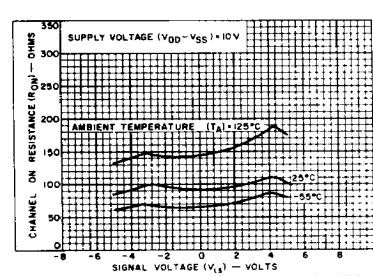

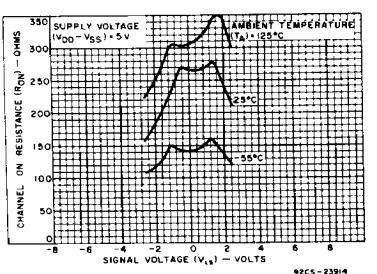

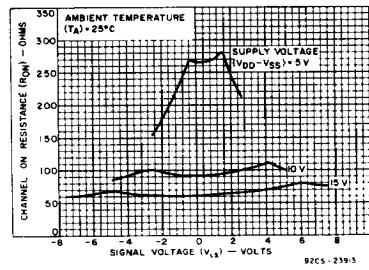

## CD4066A Types

### Applications:

- Analog signal switching/multiplexing
  - Signal gating Modulator
  - Squelch control Demodulator
  - Chopper Commutating switch
- Digital signal switching/Multiplexing
