

# DM74LS293 4-Bit Binary Counter

### **General Description**

The 'LS293 counter is electrically and functionally identical to the 'LS93. Only the arrangement of the terminals has been changed for the 'LS293.

Each of these monolithic counters contains four masterslave flip-flops and additional gating to provide a divide-bytwo counter and a three-stage binary counter for which the count cycle length is divide-by-eight.

All of these counters have a gated zero reset.

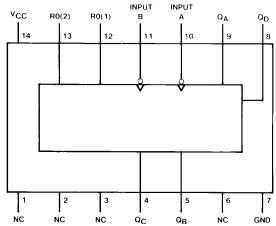

To use the maximum count length (four-bit binary) of these counters, the B input is connected to the  $Q_A$  output. The input count pulses are applied to input A and the outputs are as described in the appropriate function table.

#### **Features**

- GND and V<sub>CC</sub> on Corner Pins (Pins 7 and 14 respectively)
- Typical power dissipation 45 mW
- Count frequency 42 MHz

### **Absolute Maximum Ratings (Note)**

If Military/Aerospace specified devices are required, please contact the National Semiconductor Sales Office/Distributors for availability and specifications.

Supply Voltage Input Voltage 7V Operating Free Air Temperature Range DM74LS  $0^{\circ}\text{C}$  to  $\,+\,70^{\circ}\text{C}$ 

Storage Temperature Range  $-65^{\circ}\text{C to} + 150^{\circ}\text{C}$ 

Note: The "Absolute Maximum Ratings" are those values beyond which the safety of the device cannot be guaranteed. The device should not be operated at these limits. The parametric values defined in the "Electrical Characteristics" table are not guaranteed at the absolute maximum ratings. The "Recommended Operating Conditions" table will define the conditions for actual device operation.
