

# TL7700 SUPPLY-VOLTAGE SUPERVISOR

SLVS220C – JULY 1999 – REVISED NOVEMBER 2004

- Adjustable Sense Voltage With Two External Resistors
- Adjustable Hysteresis of Sense Voltage
- Wide Operating Supply-Voltage Range . . . 1.8 V to 40 V
- Wide Operating Temperature Range . . .  $-40^{\circ}\text{C}$  to  $85^{\circ}\text{C}$
- Low Power Consumption ( $I_{\text{CC}} = 0.6 \text{ mA}$  TYP,  $V_{\text{CC}} = 40 \text{ V}$ )
- Minimum External Components

P, PS, OR PW PACKAGE  
(TOP VIEW)

NC – No internal connection

## description/ordering information

The TL7700 is a bipolar integrated circuit designed for use as a reset controller in microcomputer and microprocessor systems. The SENSE voltage can be set to any value greater than 0.5 V using two external resistors. The hysteresis value of the sense voltage also can be set by the same resistors. The device includes a precision voltage reference, fast comparator, timing generator, and output driver, so it can generate a power-on reset signal in a digital system.

The TL7700 has an internal 1.5-V temperature-compensated voltage reference from which all function blocks are supplied. Circuit function is very stable, with supply voltage in the 1.8-V to 40-V range. Minimum supply current allows use with ac line operation, portable battery operation, and automotive applications.

## ORDERING INFORMATION

TA	PACKAGE†		ORDERABLE PART NUMBER	TOP-SIDE MARKING
$-40^{\circ}\text{C}$ to $85^{\circ}\text{C}$	PDIP (P)	Tube of 50	TL7700CP	TL7700CP
	SOP (PS)	Reel of 2000	TL7700CPSR	T7700
	TSSOP (PW)	Tube of 150	TL7700CPW	T7700
		Reel of 2000	TL7700CPWR	

† Package drawings, standard packing quantities, thermal data, symbolization, and PCB design guidelines are available at [www.ti.com/sc/package](http://www.ti.com/sc/package).

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

PRODUCTION DATA information is current as of publication date. Products conform to specifications per the terms of Texas Instruments standard warranty. Production processing does not necessarily include testing of all parameters.

**absolute maximum ratings over operating free-air temperature range (unless otherwise noted)†**

Supply voltage, $V_{CC}$ (see Note 1) .....	41 V	
Sense input voltage range, $V_S$ .....	–0.3 V to 41 V	
Output voltage, $V_{OH}$ (off state) .....	41 V	
Output current, $I_{OL}$ (on state) .....	5 mA	
Package thermal impedance, $\theta_{JA}$ (see Notes 2 and 3):	P package .....	85°C/W
	PS package .....	95°C/W
	PW package .....	149°C/W
Operating virtual junction temperature, $T_J$ .....	150°C	
Storage temperature range, $T_{Stg}$ .....	–65°C to 150°C	

† Stresses beyond those listed under “absolute maximum ratings” may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under “recommended operating conditions” is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

- NOTES: 1. All voltage values are with respect to the network ground terminal.  
 2. Maximum power dissipation is a function of  $T_J(\max)$ ,  $\theta_{JA}$ , and  $T_A$ . The maximum allowable power dissipation at any allowable ambient temperature is  $P_D = (T_J(\max) - T_A)/\theta_{JA}$ . Operating at the absolute maximum  $T_J$  of 150°C can impact reliability.  
 3. The package thermal impedance is calculated in accordance with JESD 51-7.

detailed description

sense-voltage setting

The SENSE terminal input voltage, V<sub>S</sub>, of the TL7700 typically is 500 mV. By using two external resistors, the circuit designer can obtain any sense voltage over 500 mV. In Figure 19, the sensing voltage, V<sub>S'</sub>, is calculated as:

$$V_{S'} = V_S \times (R1 + R2)/R2$$

Where:

$$V_S = 500 \text{ mV, typically at } T_A = 25^\circ\text{C}$$

At room temperature, V<sub>S</sub> has a variation of 500 mV ± 5 mV. In the basic circuit shown in Figure 19, variations of [±5 × (R1 + R2)/R2] mV are superimposed on V<sub>S</sub>.

Figure 19

SLVS220C – JULY 1999 – REVISED NOVEMBER 2004

## sense-voltage hysteresis setting

If the sense voltage,  $V_S$ , does not have hysteresis in it, and the voltage on the sensing line contains ripples, the resetting of TL7700 will be unstable. Hysteresis is added to the sense voltage to prevent such problems. As shown in Figure 20, the hysteresis,  $V_{hys}$ , is added, and the value is determined as:

$$V_{hys} = I_S \times R1$$

Where:

$$I_S = 2.5 \mu A, \text{ typically at } T_A = 25^\circ C$$

At room temperature,  $I_S$  has variations of  $2.5 \mu A \pm 0.5 \mu A$ . Therefore, in the circuit shown in Figure 19,  $V_{hys}$  has variations of  $(\pm 0.5 \times R1) \mu V$ . In circuit design, it is necessary to consider the voltage-dividing resistor tolerance and temperature coefficient in addition to variations in  $V_S$  and  $V_{hys}$ .

NOTE A: The sense voltage,  $V_S$ , is different from the SENSE terminal input voltage,  $V_S$ .  $V_S$  normally is 500 mV for triggering.

Figure 20.  $V_{CC}$ -RESET Timing Chart

## output pulse-duration setting

Constant-current charging starts on the timing capacitor when the sensing-line voltage reaches the TL7700 sense voltage. When the capacitor voltage exceeds the threshold level of the output drive comparator,  $\overline{RESET}$  changes from a low to a high level. The output pulse duration is the time between the point when the sense-pin voltage exceeds the threshold level and the point when the  $\overline{RESET}$  output changes from a low level to a high level. When the TL7700 is used for system power-on reset, the output pulse duration,  $t_{po}$ , must be set longer than the power rise time. The value of  $t_{po}$  is:

$$t_{po} = C_t \times 10^5 \text{ seconds}$$

Where:

$C_t$  is the timing capacitor in farads

There is a limit on the device response speed. Even if  $C_t = 0$ ,  $t_{po}$  is not 0, but approximately 5  $\mu s$  to 10  $\mu s$ . Therefore, when the TL7700 is used as a comparator with hysteresis, without connecting  $C_t$ , switching speeds ( $t_r/t_f$ ,  $t_{po}/t_{pd}$ , etc.) must be considered.

**PACKAGING INFORMATION**

<sup>(1)</sup> The marketing status values are defined as follows:

**ACTIVE:** Product device recommended for new designs.

**LIFEBUY:** TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

**NRND:** Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

**PREVIEW:** Device has been announced but is not in production. Samples may or may not be available.

**OBsolete:** TI has discontinued the production of the device.

<sup>(2)</sup> Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS) or Green (RoHS & no Sb/Br) - please check <http://www.ti.com/productcontent> for the latest availability information and additional product content details.

**TBD:** The Pb-Free/Green conversion plan has not been defined.

**Pb-Free (RoHS):** TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

**Green (RoHS & no Sb/Br):** TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

<sup>(3)</sup> MSL, Peak Temp. -- The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

## IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, modifications, enhancements, improvements, and other changes to its products and services at any time and to discontinue any product or service without notice. Customers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All products are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its hardware products to the specifications applicable at the time of sale in accordance with TI's standard warranty. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by government requirements, testing of all parameters of each product is not necessarily performed.

TI assumes no liability for applications assistance or customer product design. Customers are responsible for their products and applications using TI components. To minimize the risks associated with customer products and applications, customers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any TI patent right, copyright, mask work right, or other TI intellectual property right relating to any combination, machine, or process in which TI products or services are used. Information published by TI regarding third-party products or services does not constitute a license from TI to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. Reproduction of this information with alteration is an unfair and deceptive business practice. TI is not responsible or liable for such altered documentation.

Resale of TI products or services with statements different from or beyond the parameters stated by TI for that product or service voids all express and any implied warranties for the associated TI product or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.
